Signing Instructions for MAC Installer

Environment:
1. Verify that the Installer is compressed inside a DMG.
2. Verify the status of the Apple dev certificate (not outdated).
3. Use Developer ID Application certificate.

Procedure:
First Sign the AssetsChanger and then the Installer.app
Mount the received DMG by double clicking it
Open Terminal and enter the following commands:

1. cd /Volumes/<DMG Vol Name>/<Installer App Name>.app/Contents/bin/
2. codesign --force -s "<SIGN_IDENTITY>" -v "AssetsChanger"
3. cd /Voumes/<DMG Vol Name>
4. codesign --force -s "<SIGN_IDENTITY>" -v "<Installer app name>.app"

Signature Verification
In order to verify that the installer is signed correctly perform the following:
1. Open Terminal and enter :

     - code sign -dvvv /Volumes/<DMG Vol Name>/<Installer App Name>.app/Contents/bin/
       AssetsChanger

     - Verify that the Asset is signed by the correct Apple ID

     - code sign -dvvv /Volumes/<DMG Vol Name>/<Installer App Name>.app

     - Verify that the Asset is signed by the correct Apple ID

2. Send The resigned DMG by mail \ upload to a fileserver.
3. Download the DMG from the Browser.
4. Run the Installer and verify that there are no Errors on launch.
